Y-DNA37 results have been uploaded for kit 662057, George Duerksen. Y-DNA37 test results are at the intermediate-level for tracing your direct paternal lineage. They include information about your geographic origins on this line. Matches who share your surname are genealogically relevant.

If you ordered additional tests (of a different type or higher resolution) you will be notified separately when those tests are complete.

Accessing Your Results

You may view your actual marker values (your results) on our website by following these steps:

1. Login to your [myFTDNA account](#).
2. Click on myFTDNA in the top left corner and find the Y-DNA menu.
3. From the Y-DNA menu, select Y-STR Results.

Accessing Your Matches

You may check for matches to other testing participants on our website by following these steps:

1. Login to your [myFTDNA account](#).
2. Click on myFTDNA in the top left corner and find the Y-DNA menu.
3. From the Y-DNA menu, select Matches.

Note that if your paternal line is rare, you may not have matches. As our database is growing quickly, you may have matches over time, and we will send you e-mail notifications about new matches.

What is the Direct Paternal Lineage?

Your direct paternal lineage is the line that follows your father's paternal ancestry. This line consists entirely of men. It traces your father, his father, his father's father, and so forth back to our shared common paternal ancestor. For genealogists, this clear line

means that they can trace two or more descendants of a single man many generations back and compare their Y-DNA results with the expectation of a match. For those interested in deeper ancestry, tracing the modern geographic origins of exact and close matches means that they can discover with great certainty the origins of their own line.

Note that because Y-DNA follows exclusively the direct paternal line, common ancestors between you and your matches on other parts of your pedigree are coincidental.

Our help pages have the answers to questions about Y-DNA test results. There are two relevant sections.

The first is the Y-DNA User Guide: [Paternal Lineage Tests](#).

The second is the [Y-DNA Pages in our Learning Center](#) section.

Recovering Your Password

If you have misplaced your password, you may recover it by following these steps:

1. Go to the Forgot [Password page](#).
2. Enter your kit number and e-mail address in the recovery form.
3. Click the Get Password button.
4. Check your e-mail for a message from Family Tree DNA.

Privacy

Family Tree DNA cares about your privacy; when you use our internal database your privacy is assured. However, you should use caution if you are ever asked to export your results to other databases not endorsed by Family Tree DNA. Be sure you have confidence in the privacy protections of whoever is requesting your data. Under no circumstances should you share your kit number and password outside of Family Tree DNA.

Thank you for testing at Family Tree DNA,

Gentlemen,

It has been some time since the David Duerksen #14628 descendant
Gerhard Duerksen, in Abbotsford, submitted a sample for kit 662057

I fear now that I cannot find even our original emails about this opportunity.
I am hoping you preserved a record of this man.

As you may recall, the hope is that his dna and mine may somehow resolve the question
of whether or not Johann Kornelius Duerksen #14630 and David Duerksen #14628 were
siblings.

Thank you very much!

Mike Dirksen
